PROJECTS

Employee Leave Management System

Tech Stack: Java, Spring Boot, Spring Data JPA, MySQL, REST API, Maven

- Built a role-based REST API with Employee, Manager, and Admin roles; managed leave lifecycle (Applied → Approved / Rejected) with automatic leave balance tracking per leave type.
- Designed layered architecture (Controller → Service → Repository) for clean separation of concerns; tested all endpoints via Postman; source code available on GitHub.
- Implemented custom exception handling with meaningful HTTP error responses for invalid operations.

HelpDesk System (Role-Based)

Tech Stack: Java, Hibernate (ORM), MySQL

- Designed a backend ticket management system with defined state transitions (Open → In Progress → Resolved → Closed) and role-based access control for User, Support Agent, and Admin.
- Used Hibernate ORM for entity-to-table mapping and transactional persistence to maintain a full audit history of ticket actions.
- Focused on clean backend architecture, data consistency, and workflow-driven business logic.
